

## focused performance to **IMPROVE QUALITY** of care

Planning and implementing complex healthcare initiatives when compliance and quality matter

OUR

# HEALTHCARE FOCUS

## PRACTICING MEDICINE IN AN ELECTRONIC AGE

We live in an electronic age. Companies across the country are undergoing wholesale changes to fully take advantage of electronic business solutions. The healthcare industry is no exception and Electronic Health Records (EHR) are a prime example of emerging technology in the field.

Since 2000, EHR implementation has been steadily increasing and offers some tremendous opportunities for small medical practices all the way to large hospital facilities. By 2005, one quarter of physicians reported using some sort of EHR system. As part of the 2009 federal stimulus package, the HITECH Act gave specific incentives for medical professionals to adopt EHR, with future penalties in store for those choosing not to convert.

## SEAMLESS IMPLEMENTATION

From private practices to large organizations, NetLander has built a stellar reputation for streamlined project management in the implementation of EHR systems. Our smooth, secure solutions allow for seamless conversions so you can operate at peak efficiency, reduce costs and focus on what matters most – superior care for your patients. In addition our expertise in large occupational and clinical health initiatives allows organizations to better monitor employee health and identify possible health and safety hazards.

## UNDERSTANDING VALUE

NetLander understands the value of quality of care and cost savings available through enhanced technology and systemwide processes. Leveraging great success managing an agency-wide occupational and clinical health system at all 14 NASA centers serving 100,000 patients, NetLander offers planning and implementation of complex healthcare initiatives when compliance, confidentiality and IT security matter.

## MISSION PARTNER

NetLander is a leading project management company providing innovative systems, processes and solutions in aerospace, healthcare, information systems, and security to commercial and government customers worldwide.

## ADVANTAGES OF ENHANCED MEDICAL TECHNOLOGY

- Increased patient safety by reducing errors
- Increased accuracy in medical testing
- Immediate access to vital patient information (allergies, diagnoses, test results)
- Rapid exchange of information between providers
- Medication management
