

SECURITY

focused performance when **READINESS** is **PARAMOUNT**

Implementing systems to protect and save lives, property
and the environment during emergencies and disasters

OUR SECURITY FOCUS

As our dependency on technology and automated systems continues to grow, organizations should look for ways to make their operations more secure. NetLander works with organizations whose goals are saving lives and protecting property and the environment during emergencies and disasters.

NETLANDER CLIENTS

- First Responders
- Incident Commanders
- Emergency Managers
- Law enforcement at the local, state and federal level
- Private commercial companies

Because of the risk involved, many organizations make security and backup systems a paramount priority. Located on the Florida coast, major hurricanes are always a possibility and having emergency backup measures in place is essential. Through our GSA contract, NetLander has the ability to provide expedited disaster to affected areas.

PROVEN MISSION-CRITICAL SUCCESS

NetLander's expertise in this area is immense through our background managing mission critical projects for NASA. Our experienced project management professionals facilitate communications among disparate systems required in mission critical, disaster scenarios where technology system failures could result in loss of life. For other organizations, a similar collapse of software infrastructure could result in loss of product, data (electronic health records) or a total shut down of operations.

As threats grow in number and complexity, solutions must become proactive instead of reactive. Before, during and after a catastrophe, NetLander frees organizations to address critical functional issues while structural system and processes are maintained.

MISSION PARTNER

NetLander is a leading project management company providing innovative systems, processes and solutions in aerospace, healthcare, information systems, and security to commercial and government customers worldwide.

OUR KEY STRENGTHS:

- **Disaster relief** to mitigate damage to IT technology
- **Emergency Project Management** so First Responders and law enforcement can function with confidence knowing systems are stable and secure.
- **Security Project Management** so local, state and federal agencies can properly communicate with constituents under the ARRA of 2009
- **Surveillance Project Management** so organizational assets (intellectual and physical) are proactively shielded from disaster and theft.
